ELM USA's ECO Master Multi-Disc Repair/Cleaning System meets or exceeds all required specifications as listed below:

1. **Fully Automatic Disc Repair Machine** for unattended repair of up to 50 DVDs, CDs, and specialty discs with light, medium and deep scratches, without operator intervention.
2. **Statistical Reports:**
 - Repair History Report – Displays the total number of DVDs, CDs, and specialty discs repaired and the mode they were repaired in.
 - Pad Usage Report – Provides a running count of all pad usage and indicates replacement intervals for each of the pads.
3. **Diagnostic Display Screens:**
 - Fluid Timers – Monitors polish compound and water usage.
 - Error History – Monitors all error history codes for troubleshooting diagnostics.
4. **Separate Sanding Mode** to repair heavy gouges in discs that cannot be repaired in standard mode.
5. **6-Stage Microprocessor Controlled Flat Polishing Technology**, allows repeated repairs without distorting the disc surface so the disc will still play after 5, 10, 15 repairs, etc. – controls all stage timing, pad pressures, rotation directions, and speeds.
6. **Capability to repair double-sided DVDs and CDs** for light through deep scratches, without damaging the center ring label.
7. **Automatic Pad-List Operation:** Gently lifts repair pads off the disc preventing swirl/stop marks on the discs.
8. **Color LCD Touch Panel Controller** for all functions of the machine including disc repair selections from cleaning/polishing through deep repair.
9. **6-Disc Rotating Turret** for optimal full-service disc repair.
10. **No Manual Hand-Finishing** or tinkering of the disc after repair – the disc is ready to be placed back into the jewel case.
11. **Timing of Disc Repair** should not exceed 3 minutes for light-to-medium scratches and 5 minutes for deep scratches.
12. **Selectable 4 Level Precision Blu-ray Repair Mode** for 0.5 micron repair per level selected.

environment.

- **FROM THE MACHINE BACK TO THE SHELF** - No hand finishing or cleaning after the repair process. With all of the ECO Brand Disc Repair Systems, discs come out of the machine clean, dry, free of residue and ready to go back on the shelf. Compare that to **ANY** of the competitors machines.
- **NO MESS** - Do you really want your staff subjected to the mess the other brands make. ECO Brand Disc Repair Systems are the cleanest repair process available. Try the others, then compare. Just make sure you bring a change of clothes when trying the others.
- **NO HEAT...NO ODOR** - The liquid cooled repair process means no heat or damage to the disc. Other brands use heat from a high-speed buffing process to repair the disc. The problem is, heat can damage a disc by warping it. Heat also produces odor. Do you really want your library to smell of melted plastic?
- **COMPACT DESIGN** - A very small footprint (12" x 19") and heavy duty casters allow the ECO Master to be placed virtually anywhere and moved easily by anyone.
- **VERY LOW COST PER DISC** - ECO Brand disc repair systems have the lowest cost per disc than any other machine.

**TRADE-IN THAT OLD, TIRED MACHINE.
WE ACCEPT ANY BRAND IN ANY
CONDITION IN TRADE FOR A ECO DISC
REPAIR SYSTEM.**

ELM USA's ECO machines are professional quality disc repair systems that provide safe, effective and reliable results time after time, disc after disc, year after year.

ECO Machines are not just disc polishers or buffers. Instead, they use a series of micro-abrasive repair pads and our exclusive and patented FLAT POLISHING TECHNOLOGY to remove light, medium and even deep scratches, and polish the discs so they look and play like brand new, even Blu-ray and the latest game discs. Extremely low per disc costs.

The ultra-quiet operation allows use in most library environments. Discs come out clean and pristine. No hand drying or micro-fiber cloth needed. From the machine, back onto the shelf and into circulation.

We offer a machine for every disc care challenge:

ECO SMART
PROFESSIONAL QUALITY
AFFORDABLE PRICE
